

Manuel Alejandro Murillo Macías

Senior Full Stack Developer | Scalable Frontend & .NET Architecture Specialist
mannlexx21@gmail.com | +52 311-126-3285 | linkedin.com/in/mannlexx21 | Mexico

Career Summary

I have been working in software development for over 8 years, specializing in the architecture and development of high-performance, mission-critical enterprise systems. I have deep expertise across the modern Frontend ecosystem (Angular 17+, React, Vue.js, TypeScript) backed by robust backend engineering in C# .NET and relational databases (Oracle SQL, SQL Server). Throughout my career, I have successfully led complex workflow implementations in public sector and financial domains, optimizing response latency, enforcing JWT security standards, and maintaining top-tier code quality backed by SonarQube and SonarCloud standards.

Summary of Qualifications

- 8+ years of experience as a Full Stack & Frontend Developer building enterprise-grade web applications.
- 8+ years of experience working with C# .NET, ASP.NET, RESTful APIs, and relational databases (SQL Server, Oracle SQL).
- 6+ years of experience working with modern JavaScript/TypeScript frameworks including React, Angular (17+), and Vue.js.
- Extensive experience in Micro Frontend architectures, design systems (Tailwind CSS, PrimeNG, Angular Material, MUI, Kendo UI), and performance optimization (React Query, RxJS).
- Proven track record in static code analysis, quality control, and security using SonarQube/SonarCloud and JWT authentication.
- Strong background in testing and isolated API mocking using Mock Service Worker (MSW), Axios, and modern tooling like Vite.
- 8+ years working with Git, TFS/Azure DevOps, Visual Studio, and Scrum/Agile Methodologies.

Languages

Spanish (native speaker) English (Intermediate / Professional Working Proficiency - B2)

Career History

Working with SYE Software. From January 2025 - Till date.

Project Name	: Tax Refunds and Offsets (SAT - Tax Administration Service)
Role	: Frontend Developer Advisor
Environment	: Development & Production
Duration	: Jan 2025 - Present
Tools Used	: React, TypeScript, React Query, Tailwind CSS, JWT, Vite, Git, TFS

Description: Development of critical tax processing workflows for the national tax administration agency. Designed and built high-efficiency UI components for the Refund Request module handling complex administrative procedures.

- Designed and implemented the core user interface using React and TypeScript for tax refund requests, streamlining complex procedural workflows.
- Integrated React Query for server state management and caching, significantly reducing response latency and backend API load.
- Constructed a modular reusable component library with Tailwind CSS, ensuring visual consistency, responsiveness, and clean architecture decoupling.
- Implemented centralized JWT authentication security mechanisms and optimized build pipelines using Vite and Git / TFS.

Project Name	: Master Catalog Management (SAT)
Role	: Frontend Lead & Advisor
Environment	: Development & Production
Duration	: Jan 2025 - Present
Tools Used	: Angular 17, TypeScript, RxJS, PrimeNG, Angular Material, Oracle DB, SQL, MSW, Axios, SonarQube, SonarCloud

Description: High-performance architecture and development for managing massive enterprise tax catalogs.

- Spearheaded the Angular 17 architecture utilizing RxJS for reactive asynchronous state management across massive data catalogs.
- Created advanced CRUD interfaces using PrimeNG and Angular Material, incorporating custom bulk record import/export utilities.
- Authored and executed advanced Oracle SQL scripts for preventive database maintenance, production data hotfixes, and query performance tuning.
- Implemented Mock Service Worker (MSW) and Axios for isolated API mocking, accelerating frontend development cycles.
- Enforced rigorous static code analysis standards using SonarQube and SonarCloud to eliminate security vulnerabilities and technical debt.

Qualtop Group, Ciudad de México, México

Senior Full Stack Developer Apr. 2019 – Jan. 2025

Projects : BCIE (Central American Bank for Economic Integration) & Qualtop Enterprise Platforms

Tools Used : React, MUI, Micro Frontends, Angular, ASP.NET, C#, SQL Server, Oracle SQL, Git, TFS

- Architected and integrated modular Micro Frontend systems with React and MUI, reducing feature deployment time by 20%.
- Engineered highly interactive web applications using Angular and React, establishing reusable component systems that elevated overall UX/UI responsiveness.
- Designed and maintained secure backend RESTful services using ASP.NET (C#) integrated with optimized stored procedures and complex views in SQL Server and Oracle SQL.
- Managed multi-team collaborative workflows utilizing Git and Team Foundation Server (TFS).

Projects : Edenred & C&A Financial / Retail Systems

Tools Used : Angular, ASP.NET, C#, Razor, Kendo UI, JavaScript, HTML5/CSS3, SQL Server, SonarCloud

- Engineered enterprise web modules combining Angular, ASP.NET Razor, and Kendo UI component suites.
- Designed and deployed secure C#.NET RESTful APIs, ensuring reliable client-server integration and communication stability.
- Created and optimized complex stored procedures in Microsoft SQL Server while maintaining code quality via SonarCloud.

MAVI S.A. DE C.V., Guadalajara, Jalisco, México

Full Stack Developer Mar. 2018 – Apr. 2019

Projects : Internal Enterprise Systems

Tools Used : Vue.js, JavaScript (ES6+), C#.NET, REST APIs, SQL Server, Git

- Developed dynamic, responsive user interfaces using Vue.js, JavaScript (ES6+), HTML5, and CSS3 for critical internal operations.
- Built and maintained enterprise C#.NET backend APIs ensuring seamless synchronization between backend services and client UI.
- Optimized complex SQL Server stored procedures, significantly lowering query response times during high-volume data operations.

Ingenio de Puga S.A. DE C.V., Tepic, Nayarit, México

Full Stack Developer Aug. 2017 – Mar. 2018

Projects : Internal Management Applications

Tools Used : C#.NET, Razor, WinForms, JavaScript, HTML/CSS, SQL Server

- Developed cross-platform web and desktop applications using ASP.NET Razor, WinForms UI, JavaScript, HTML, and CSS.
- Implemented core business logic, backend services, and SQL Server queries/stored procedures for internal process management.

Education

Systems Engineering (Ingeniería en Sistemas Computacionales)

Instituto Tecnológico de Tepic, Tepic, México | Graduated 2012 - 2018
